Progression of Learning in Secondary School

The progression of learning in secondary school constitutes a complement to each school subject, providing further information on the knowledge that the students must acquire and be able to use in each year of secondary school. This tool is intended to assist teachers in planning both their teaching and the learning that their students are to acquire.

The role of knowledge in learning

The knowledge that young people acquire enables them to better understand the world in which they live. From a very early age, within their families and through contact with the media and with friends, they accumulate and learn to use an increasingly greater body of knowledge. The role of the school should be to progressively broaden, deepen and structure this knowledge.

Knowledge and competencies must mutually reinforce each other. On the one hand, knowledge becomes consolidated when it is used and, on the other hand, the exercise of competencies entails the acquisition of new knowledge. Helping young people acquire knowledge raises the challenging question of how to make this knowledge useful and durable, and thus evokes the notion of competency. For example, we can never be really assured that a grammar rule has been assimilated until it is used appropriately in a variety of texts and contexts that go beyond the confines of a repetitive, targeted exercise.

Intervention by the teacher

The role of the teacher in knowledge acquisition and competency development is essential, and he or she must intervene throughout the learning process. In effect, the *Education Act* confers on the teacher the right to “select methods of instruction corresponding to the requirements and objectives fixed for each group or for each student entrusted to his care.” It is therefore the teacher’s responsibility to adapt his or her instruction and to base it on a variety of strategies, whether this involves lecture-based teaching for the entire class, individualized instruction for a student or a small group of students, a series of exercises to be done, a team activity or a particular project to be carried out.

In order to meet the needs of students with learning difficulties, teachers should encourage their participation in the activities designed for the whole class, although support measures should also be provided, when necessary. These might involve more targeted teaching of certain key elements of knowledge, or they might take the form of other specialized interventions.

As for the evaluation of learning, it serves two essential functions. Firstly, it enables us to look at the students’ learning in order to guide and support them effectively. Secondly, it enables us to verify the extent to which the students have acquired the expected learning. Whatever its function, in accordance with the *Policy on the Evaluation of Learning*, evaluation should focus on the acquisition of knowledge and the students’ ability to use this knowledge effectively in contexts that draw upon their competencies.

Structure

The progression of learning is presented in the form of tables that organize the elements of knowledge similarly to the way they are organized in the subject-specific programs. In mathematics, for example, learning is presented in fields: arithmetic, geometry, etc. For subjects that continue on from elementary school, the *Progression of Learning in Secondary School* has been harmonized with the *Progression of Learning in Elementary School*. Every element of learning indicated is associated with one or more years of secondary school during which it is formally taught.

A uniform legend is used for all subjects. The legend employs three symbols: an arrow, a star and a shaded box. What is expected of the student is described as follows:

→	Student constructs knowledge with teacher guidance.
★	Student applies knowledge by the end of the school year.
	Student reinvests knowledge.

An **arrow** indicates that teaching must be planned in a way that enables students to begin acquiring knowledge during the school year and continue or conclude this process in the following year, with ongoing systematic intervention from the teacher.

A **star** indicates that the teacher must plan for the majority of students to have acquired this knowledge by the end of the school year.

A **shaded box** indicates that the teacher must plan to ensure that this knowledge will be applied during the school year.

Drama

Introduction

In order to create, perform and appreciate dramatic works, students must acquire a certain amount of knowledge related to the language of drama. Presented schematically in the compulsory and optional programs, this learning is addressed here in order to facilitate teachers' planning.

Divided into two sections, *Knowledge* and *Applications of Knowledge*, this document provides an overview of the learning that students are expected to acquire over the course of their arts education studies at the secondary level, both in the compulsory program and in the optional programs. The first section covers knowledge that students should have acquired by the end of each cycle, as well as by the end of Secondary IV, where the certification of studies applies. The second section illustrates, by means of observable actions, how this knowledge is mobilized in the exercise of the three competencies developed in this program. The action verbs used in the statements characterize the progression of learning for each key feature of the competencies, from one cycle to another, and from year to year within each cycle. Also included is a review of the learning acquired at the elementary level upon which the secondary learning is based.

Since competency development and acquisition of the knowledge underlying the competency are closely related, the particulars contained in this document should enable teachers to help students acquire the tools they need to develop the competencies of the Drama program and to discover their artistic sensitivity and their creative potential, whether they are enrolled in the compulsory program or in one of the optional programs. In their planning, teachers should reserve time for the assimilation of certain elements of the learning content in order to offer students exploration activities as well as simple and varied tasks for improvement purposes, or more complex tasks involving the application of different kinds of knowledge in a particular context.

Throughout their drama studies, students learn to use different types of knowledge acquired in the classroom and through their cultural experiences in order to create their own dramatic works and perform those of different authors. They acquire the skills necessary to exercise critical judgment when appreciating a dramatic work and learn to use correct English and the appropriate terminology to formulate this appreciation.

In the optional Drama programs, students enhance the knowledge acquired in the compulsory program. In the context of more complex learning and evaluation situations, they are encouraged to consider the symbolic treatment of elements of dramatic language and to develop their ability to use these elements in the context of stage and multimedia environments, especially in the optional program *Drama and Multimedia*. They thus discover new avenues of creation, performance and appreciation.

The secondary-level Arts Education programs were designed to ensure a continuous progression of learning in the same arts subject from the beginning to the end of secondary school. Students can thus pursue their artistic development in a single subject into the second cycle. However, it may happen that some students may change subjects in each year of Cycle Two. It is therefore important to establish conditions that will ensure as complete a training in drama as possible.
