INTRODUCTION

In 2004, the Direction de la formation générale des adultes (DFGA) of the Ministère de l’Éducation (MEQ) produced a course entitled *Drug Abuse Education*. It was developed in collaboration with participants from school boards and community organizations.

The objective of the course is “to enable citizens to obtain information about alcohol, drug and medication consumption in various life situations in order to increase their awareness of the subject, define their position in relation to it and assume responsibility.” Its companion document, the *Course Organization Guide*, covers such topics as raising awareness about the development process of a dependency.

An information tour held in the fall and winter of 2002-2003 consisted of nine regional meetings involving participants from school boards and public health departments (directions de la santé publique).

Considering that some teachers experienced difficulty using the content of the course when teaching in a group leadership context, the DFGA decided to develop a series of individualized learning activities in order to help teachers plan individualized teaching based on the general elements of the course’s common core content. We believe this will allow the course to be more widely used and to better meet the needs of adults.

The learning activities suggested for students are based on a research project. They can carry out their research by selecting one or more life situations, taking into account the compulsory content of the course. Furthermore, they can develop skills in drug abuse prevention according to the indicators mentioned in the course.

The suggested learning activities are appropriate for the PRS-5140-3 course, which requires 75 hours to complete. It would be possible to adapt the activities to local course codes, such as PRS-5141-1, PRS-5142-2 and PRS-5143-3, which have been made available to school boards. However, it will be necessary to adapt the content of the activities to the course duration, taking into account the course’s compulsory common core content.

The definition of the domain for the purposes of summative evaluation for the PRS-5140-3 course has been distributed to school boards.

It should also be noted that this course is optional and there is no prerequisite. It is designed for all students enrolled in adult education courses. It is also available to individuals or groups who already have a Secondary School Diploma (SSD) and who wish to become more aware of their responsibilities as citizens or parents, or who have been sentenced by a court or are subject to an administrative measure in the Alcofrein program (awareness session for persons found guilty of impaired driving).

---

1 A RESEARCH STRATEGY APPLIED TO INDIVIDUALIZED LEARNING

The suggested strategy is modeled on project-based learning carried out in a context of individualized learning.

In this context, students are at the centre of the teaching process. They act as committed, responsible learners and become the architects of their own success. The teacher acts as a guide and mediator in the learning progress. As for the project, it is an essential feature of the construction of knowledge. It is a tool that supports both teaching and learning. In order to sustain commitment to a project and ensure its success, a number of conditions must be in place, specifically, the following:

<table>
<thead>
<tr>
<th>Students:</th>
<th>Teachers:</th>
<th>The project:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Act out of interest, motivation and intuition</td>
<td>- Act as mediators</td>
<td>- Is meaningful for the student, authentic and reality-based</td>
</tr>
<tr>
<td>- Refer to their prior learning and experience from a cognitive, socioaffective and psychomotor perspective</td>
<td>- Stimulate imagination and creative potential</td>
<td>- Includes a degree of feasibility and plausible results</td>
</tr>
<tr>
<td>- Question themselves, are curious and have a desire to understand</td>
<td>- Are sensitive to students’ learning styles</td>
<td>- Requires a certain degree of complexity (reflective, analytical, critical and synthetic thinking)</td>
</tr>
<tr>
<td>- Participate in the construction of their knowledge</td>
<td>- Interact in the process of constructing knowledge</td>
<td>- Mobilizes internal and external resources at the cognitive, socioaffective and psychomotor levels</td>
</tr>
<tr>
<td>- Are responsible for their learning</td>
<td>- Situate the students in their learning path</td>
<td>- Requires the application of a variety of learning strategies</td>
</tr>
<tr>
<td>- Use a variety of resources</td>
<td>- Encourage relations with the environment</td>
<td>- Has a multidimensional scope in relation to adult social roles</td>
</tr>
<tr>
<td>- Put a variety of learning strategies into practice</td>
<td>- Draw on metacognitive strategies</td>
<td>- Has potential for transferable learning</td>
</tr>
<tr>
<td>- Integrate their learning into their experience</td>
<td>- Create a climate conducive to participation and empowerment</td>
<td>- Requires collaboration</td>
</tr>
<tr>
<td>- Look for ways to transfer their learning</td>
<td>- Counsel and guide the students</td>
<td>- Leads to discoveries</td>
</tr>
<tr>
<td>- Undertake to complete their project successfully</td>
<td></td>
<td>- Leads to action</td>
</tr>
</tbody>
</table>
The educational aims of the course are:

- **To understand the phenomenon of alcohol, drug and medication consumption and the issues associated with it**
  - To be informed in order to reflect on the phenomenon of consumption
  - To place oneself in a broader context in terms of the issues related to consumption

- **To be sensitized to one’s perceptions**
  - To become aware of one’s perceptions
  - To establish connections with one’s own attitudes and behaviours

- **To understand the effects of consumption on oneself and on others**
  - To be sensitized to the causes and consequences of consumption
  - To recognize the consequences of consumption
  - To evaluate the risks for oneself and for others

- **To support preventive actions related to consumption**
  - To learn to intervene before problems occur
  - To adopt preventive behaviour taking into account various life situations
  - To use one’s personal resources, talents and strengths
  - To be familiar with the resources in one’s community

---

3 ANDRAGOGY

3.1 ADULT EDUCATION APPROACH

Proposed Adult Education Approach

Problems related to drug abuse require an examination of emotions and a search for solutions that either alleviate or are adapted to the consequences for oneself and others. In their approach, teachers and other professionals must demonstrate interpersonal skills and expertise in adult education.

In this context, we propose using an approach based on the individuals’ own experiences to help them organize and integrate knowledge so that they may transfer their learning to different life situations, as required.

---
Below is a diagram that illustrates this adult education approach.\textsuperscript{4} It consists of four steps: A) Prior experience; B) Assimilation of knowledge; C) Integration of knowledge; D) Preparation for the transfer of learning.

\textsuperscript{4} The bibliography at the end of this document suggests resources for teachers interested in learning more about the concepts related to the adult education approach.
A) Prior Experience

Adults’ experiences include the various knowledge they have acquired in social, cultural and personal contexts. With this in mind, adults will be able to make use of their prior experiences from the outset of their learning.

In this way, their prior experience is used as a trigger. The social interaction that takes place in the classroom is considered as conducive to the structuration and restructuration of the various types of knowledge (knowledge, know-how and interpersonal skills).

B) Assimilation of Knowledge

The process of assimilating knowledge should make learning meaningful and stimulating. Adults’ learning should be oriented according to the following learning path:

- Recognizing his or her prior experience enables the adult to make connections between prior knowledge of various kinds and newly acquired knowledge.
- Putting knowledge into perspective is conducive to the representation and organization of competencies.
- Considering new structured and detailed models leads the adult to modify his or her frame of reference according to cognitive and metacognitive strategies.
- Selecting strategies creates interrelations and points to logical connections.
- Using strategies gives the learning process shape and makes it meaningful.

Assimilating knowledge is an important step that involves overcoming certain obstacles. Adults must learn to come to terms with their errors and face the challenges before them in order to make positive use of their past experiences, accomplishments and difficulties and to perceive them as clues to the meaning of knowledge and as components in the construction of knowledge. Establishing meaningful contexts reflecting life situations that make learning significant will enable adults to develop or acquire useful knowledge and skills.
C) Integration of Knowledge

The integration of knowledge helps individuals measure the gap between what they can do (current situation) and what they could do (desired situation). At this step, the adult’s learning process takes place according to the path set out below:

- Looking for a solution becomes a cognitive and affective exercise that requires a commitment from the adult.
- The development of reflective skills helps adults avoid making hasty decisions and therefore results in rational and prudent reactions.
- Metacognitive strategies related to knowing oneself enable the development or acquisition of skills needed to maximize the learning process.
- Through objectivation adults become aware of the usefulness of their learning.

The integration of knowledge is a step that enables adults to evaluate risks, consider possibilities and, when necessary, modify their behaviour in relation to the consumption of alcohol, drugs and medication.

D) Preparation for the Transfer of Learning

When necessary, adults can draw conclusions and make connections between cause and effect as they pertain to the situation. At this step, they will be preparing to transfer their learning to their own life situations. In this way, the success of the proposed adult education approach will be apparent over time and in situations independent of training provided in the classroom.
3.2 PURPOSE OF THE ADULT EDUCATION APPROACH

The proposed approach is based on adult education approaches that take into account the development of the adult as an individual:

- **The adult is considered as a total person**
  - Respect for differences
  - Recognition of his or her prior knowledge and experience in the areas of knowledge, know-how and interpersonal skills

- **The adult is considered as a social being**
  - Active participation in the evolution of society and in current social changes
  - Development of a sense of belonging to the community
  - Prevention of social exclusion
  - Interdependent relationships with others

- **The adult is considered to be independent and responsible**
  - Assimilation of preventive strategies relative to drug abuse
  - Objectivation of his or her learning
  - Commitment to the adoption of preventive behaviours
  - Increase of his or her capacities to make enlightened choices in relation to drug abuse
  - Preparation for the transfer of learning in various life situations

---

4 RESEARCH PROCEDURE

The research procedure suggested in this guide consist of five steps, representing a total duration of 75 hours.

4.1 DIAGRAM OF STEPS
### 4.2 DESCRIPTION OF THE STEPS OF THE RESEARCH PROCEDURE

4.3 INFORMATION PROVIDED FOR EACH STEP

<table>
<thead>
<tr>
<th>Learning focus</th>
<th>Learning contexts, resources and expected productions</th>
<th>Success indicators</th>
</tr>
</thead>
</table>
| • A learning focus indicates the objective of an activity or a group of activities, as well as the direction or scope of a learning situation. It also specifies the learning content. (For example: “Select a life situation.”) | • Activities
The suggested activities are not limited to one task or a group of tasks. “These are a set of coordinated actions that extend beyond the specific field of tasks, involving procedures or productions related to significant dimensions of the situation under study.” [translation]

• Resources
The resources suggested are human and material resources appropriate for carrying out the activities mentioned.

• Main outcome
The main outcome is the finished product or result obtained after carrying out an activity or group of activities. | • The success indicators provide information on the progress and achievement of learning. “They enable us to judge the relevance, effectiveness, impact and efficiency of an activity (group of activities) or a project.” [translation] |

---

5 ORGANIZATION OF LEARNING

5.1 DURATION OF LEARNING AND COURSE CODES

The suggested learning activities are appropriate for the PRS-5140-3 course, which requires 75 hours to complete. It would be possible to adapt the activities to the local course codes, such as PRS-5141-1, PRS-5142-2 and PRS-5143-3, which have been made available to school boards. However, it will be necessary to adapt the content of the activities to the course duration, taking into account the course’s compulsory common core content.

The *Course on Drug Abuse Education* program and the *Course Organization Guide* are available on the DFGA Web site or from the regional offices of the MEQ. The reference numbers for these documents are, respectively, 41-2001-PA and 41-2001-A.

5.2 THE STUDENT’S LEARNING FILE

The student’s learning file contains the main productions realized during the course of the research project. It may combine different types of productions: portfolio, logbook, users’ kit, etc. Students will be required to do a final presentation at the end of the course.

The *Appendix* outlines the productions that can be included in the student’s learning file in relation to the steps of the research procedure proposed in this guide.
5.3 INSTRUCTIONAL MATERIALS

School boards are responsible for choosing the instructional materials for the learning activities.

Some examples are:

- Basic information on the course
- Recording tools that will become part of the student’s learning file:
  - portfolio
  - logbook
  - sample work of a plan for a research project
  - information sheets or cards
  - questionnaires, question banks
  - outlines, diagrams, blank charts
  - other
- Basic documentation on drug abuse:
  - glossary of principal terms
  - folders, pamphlets
  - newspaper and magazine articles, press kits
  - books
  - Web sites
  - videos, films
  - directory of public, parapublic and community resources
  - other
- Group activity tools:
  - quiz game
  - crossword puzzles
  - other
- Self-evaluation grids for each step in the research procedure
### 5.4 SUGGESTED RESOURCE MATERIALS

Below are some suggested resource materials related to concepts from the common core content. These materials were used during the writing and piloting of the course. They are not prescriptive.

<table>
<thead>
<tr>
<th>Common core concepts</th>
<th>Suggested resource materials</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>
5.5 EVALUATION OF LEARNING

Formative evaluation is left to the discretion of the teacher.

The research strategy proposed in this guide includes self-evaluation periods at the end of each step in the strategy.

For the PRS-5140-3 course, the MEQ has produced a Definition of the Domain (41-2001-DDE) to be used for summative evaluation.

The Course on Drug Abuse Education program and the Course Organization Guide are available on the DFGA Web site or from the regional offices of the MEQ. The reference numbers for these documents are, respectively, 41-2001-PA and 41-2001-A.

| 2.1 To gather information on the phenomenon of consumption in drug abuse (section 9.1 of the course) | - Habits of consumption and evolution of psychoactive substances  
  - Prohibition of alcohol  
  - The 1960s and chemical substances  
  - Psychedelic era  
  - Multiple drug abuse  
  - Ecstasy and rave culture  
  - Other | • Activities  
  - Watching films and first impressions of habits of consumption (Woodstock, The Untouchables, other)  
  - “Time capsule”  
    • Construction of a short history of consumption phenomena in North America through the lives of famous people (Al Capone, Elvis Presley, Vietnam veterans, the Beatles, Jimi Hendrix, Janis Joplin, Jim Morrison, Eric Clapton, Bob Dylan, Harmonium, Dan Bigras, Robert Charlebois, Nirvana and others)  
  - “Here and elsewhere”  
    • Viewing a documentary showing different aspects of the consumption of psychoactive substances, here and elsewhere  
    • Comparison of consumption habits between Québec and elsewhere (fashionable products, prices, effects, age, dependency and other relevant elements)  
  - Awareness of consumption habits and the development of psychoactive substances in Québec  
  - Other | • To recognize habits of consumption related to the evolution of the principal substances (alcohol, drugs, medications and multiple drug abuse) in Québec and elsewhere, where applicable. (Knowing) |

| • Main outcome  
- Personal reflections on the advantages of the preventive approach in drug abuse prevention |
### Learning focus

- **Types of legislation**
  - *Criminal Code*
  - *Highway Safety Code*
  - *Controlled Drugs and Substances Act*
  - *Young Offenders’ Act*

- **Offences**
  - Possession of psychoactive substances
  - Possession for the purpose of trafficking
  - Trafficking
  - Importing and exporting
  - Production
  - Impaired driving

### Learning contexts, resources and expected outcomes

- **Activities**
  - Exploration of simplified versions of various legal documents (charts, diagrams, etc.)
  - Production of a skit with two or three characters illustrating the laws and inappropriate use of alcohol, drugs and medications (two friends, a police officer and two friends, other situations)
  - “Visit to a police station”
    - Preparation of a series of questions concerning legislation and offences related to drug abuse
    - Visit to a police station and gathering of information obtained by asking questions
  - Development of a chart that summarizes laws, offences and sanctions
  - Conclusions about legal aspects and reflection on the social forces behind the laws
  - Other

- **Resources**
  - Basic legal documentation (simplified)
  - Police officer from the local police station
  - Model for the production of a sketch (oral or written)
  - Model of a questionnaire for the meeting with police officers
  - Chart of laws, offences and sanctions and a partially completed chart, if necessary
  - Tool for recording conclusions about legal aspects and the social forces behind the laws
  - Other

- **Main outcome**
  - Summary chart of the legislation governing alcohol, drugs and medications

### Success indicators

- To recognize the main laws governing substances in force in Québec. (Knowing)
- To recognize the consequences of legal infractions. (Knowing)
- To recognize that certain legal substances can be used inappropriately or in an illegal context. (Knowing)
- To recognize the principal sanctions attached to different offences. (Knowing)
- To recognize the social forces behind the laws. (Knowing)

| • Risk factors and protection factors  
  - Individual factors  
  - Family and intergenerational factors  
  - Social factors  
  - Social, educational and vocational factors | • **Activities**  
  - Development of a diagram related to the main character being studied, based on the following elements:  
    • The risk factors that lead a person to consumption and their influence on attitudes and behaviours  
    • Protection factors  
    • Personal resources that support taking responsibility for one’s actions and adopting preventive behaviours concerning the consumption of alcohol, drugs and medications  
    • Comments on the moderating role of protection factors  
  - Other | • To connect the personal, family, social, educational or vocational factors that lead to inappropriate consumption of psychoactive drugs and influence attitudes and behaviours. (Understanding) |
| | • **Resources**  
  - Program, pp. 19, 20, 21 and 22  
  - Model for a diagram  
  - Other | • To identify personal resources that support taking responsibility for one’s actions and adopting preventive behaviours in the consumption of alcohol, drugs and medications. (Conceptualizing) |
| | • **Main outcome**  
  - Diagram identifying the risk factors and protection factors, as well as the personal resources of the main character in the situation under study | • To recognize the moderating role of protection factors in consolidating a problem of consumption of psychoactive drugs. (Knowing) |
### Learning focus

3.3 **To gather information on the consequences of inappropriate use of psychoactive drugs (section 9.4 of the course)**

- **Related consequences**
  - Economic consequences
    - Direct costs
      - Health care
      - Law enforcement
      - Road accidents
      - Debt
      - Other
    - Indirect costs
      - Loss of productivity
      - Loss of meaning in one’s life
      - Absenteeism
      - Other

### Learning contexts, resources and expected outcomes

- **Activities**
  - Assembly of a press kit or viewing of a film in which someone recounts their experience with the related and economic consequences of inappropriate use of psychoactive drugs
  - Relation to the situation under study and list of related and economic consequences, both present and future
  - Estimate, in dollars, of the direct and indirect economic costs for the situation under study
  - Other

- **Resources**
  - Model for a press kit
  - Current documents for assembling a press kit (newspapers, magazines, Web sites, other)
  - Video testimony of a former substance abuser
  - Tool for recording consequences related to the life situation
  - Model for the evaluation of direct and indirect costs
  - Other

- **Main outcome**
  - List of related and economic consequences, present and future, for the life situation under study

### Success indicators

- To determine the possible consequences of inappropriate use of psychoactive drugs. (Understanding)

- To recognize the direct and indirect costs related to inappropriate consumption of psychoactive drugs. (Knowing)
<table>
